

## NORTH AMERICAN FRESHWATER MUSSELS

Natural History, Ecology, and Conservation

WENDELL R. HAAG

CAMBRIDGE

Wendell R. Haag, a fisheries research biologist for the Southern Research Station (USDA Forest Service), offers a comprehensive and well-illustrated account of the ecology and conservation of the North American freshwater mussel. With details of the fascinating history and diversity of more than 300 species of freshwater mussels, Haag's *North American Freshwater Mussels* describes mussel ecology, the colorful role of mussels in human society, and the efforts to save these fascinating and imperiled animals. The book provides a must-read review of mussel ecology and conservation for scientists, natural resource professionals, students, and natural history enthusiasts.
