Sustaining Young Forest Communities: Ecology and Management of Early Successional Habitats in the Central Hardwood Region, USA

talks about early successional habitats and why plants and animals in these habitats are declining. Chapter authors provide the latest information about young forest communities in a format suitable for land managers, natural resource community, and university educators and their students. Topics covered include bats, birds, reptiles and amphibians, fire, water, carbon dynamics, ecosystem processes, natural and forest management disturbances, sustainable management, and the future of early successional habitats.
