Dear Mr. Greis,

Thank you for providing this opportunity for public comment about the Southern Forest Resource Assessment. I believe the report describes the true situation regarding southern forests and deserves to become the Forest Service's policy.

The trends the report details are visible all around me now and will become much worse in the next two or three decades unless behavior changes. Clean drinking water, wildlife habitat, and the economic well-being of tourism, small sawmills, and outdoor recreation will be threatened if the logging continues on its present course.

Please consider these short and long term outcomes of this important area of activity.

Thank you,

Alice Loyd
North Carolina
